

V2.10.57 Surface Messaging Matrix (compare-only)

Scope: compare and classify every mention of the historical six surfaces and related roster language across the target docs against the new product model. No code or doc edits yet.

New product model (agreed 2026-06-15):

- 1. **Core runtime agents** — Hermes (default), IronClaw, OpenClaw (optional). These are the agent runtimes the Agent Desktop connects to for its core purpose.
- 2. **Integrated support surfaces** — CodeGraph, EverOS, Headroom. These are built into the Agent Desktop app to support runtime operations.
- 3. **User-managed third-party apps** — Open WebUI, OpenCode, Warp ADE, VS Code, Ollama, LM-Studio, Odysseus, ComfyUI, Open Design, and any other tool the user chooses. These can be added or removed by the user based on need; they are not hard-coded product surfaces.
- 4. **OpenSpace is retired from the in-repo application surface.** Agent Desktop is the individual-operator control surface. Any team-level control-panel functionality lives in the cubecloud.io product line outside this repository.

1. README.md

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
119	"A multi-runtime picker: Hermes today, with OpenClaw and IronClaw planned as additional lanes."	core-runtime-agent	keep as-is	—
123	"Optional CodeGraph and EverOS integrations that are user-initiated, not silently installed."	integrated-support-surface	keep as-is	—
156	"Optional sidecars stay optional. CodeGraph and EverOS expand the system when needed..."	integrated-support-surface	keep as-is	—
164	"The desktop experience is built from six cooperating surfaces:"	six-surface roster framing	reword	"The desktop experience is built from three cooperating layers:"
167	"Runtime orchestration — describes Hermes as the current lane and OpenClaw / IronClaw as the next lanes."	core-runtime-agent	keep as-is	—
170	"CodeGraph surface — explains the optional semantic code-intelligence path."	integrated-support-surface	keep as-is	—
171	"EverOS sidecar — explains the optional memory and harness sidecar lifecycle."	integrated-support-surface	keep as-is	—
187	"apply a CodeGraph query result"	integrated-support-surface	keep as-is	—
190	"the headroom learn --apply review flow"	integrated-support-surface	keep as-is	—
207–223	Headroom context-compression section	integrated-support-surface	keep as-is	—
226–236	Graphify dev-only section (just added)	developer-aid	keep as-is	—

Note: the "six cooperating surfaces" list currently mixes runtime agents, support surfaces, and the skills harness. Under the new model it should be reframed as three layers: state/runtime/providers, support surfaces, and skills harness.

2. ABOUT.md

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
42	"OpenSpace — the team control panel."	retired surface	removed	OpenSpace is no longer listed as an in-repo surface. A retirement note is added instead.
43	"Open WebUI — the private AI workspace."	user-managed third-party	reword	Frame as an example of a user-managed chat/retrieval tool the desktop can integrate with, not as a built-in named surface.
44	"Hermes — memory, schedule, and subagents."	core-runtime-agent	keep as-is	—
45	"OpenCode — local coding assistant."	user-managed third-party	reword	Frame as an example of a user-managed coding assistant the desktop can work alongside; the in-repo screen is a local coding surface, not the OpenCode product itself.
46	"IronClaw — security, vault, and trusted execution."	core-runtime-agent	keep as-is	—
47	"Warp ADE — a shared workspace for teams building and testing AI-assisted software."	user-managed third-party	reword	Frame as an example of a user-managed multi-agent workspace; the in-repo Headroom screen is the desktop/individual-operator surface for whatever ADE is bound.
48	"ADE — possibly the runtime / IDE side of the agentic-development surface."	conceptual category	reword	Keep ADE as the general category, but clarify that Agent Desktop is the individual-operator surface and Warp ADE is one possible user-managed instance.
61–66	Demos-page table mapping OpenSpace, Open WebUI, IronClaw, Hermes, Warp ADE, OpenCode	mixed	reword	Split into two tables or sections: (1) core runtime agents (Hermes, IronClaw), (2) examples of user-managed third-party apps/surfaces (OpenSpace, Open WebUI, Warp ADE, OpenCode).
45	"Wrapped AI Applications → the swappable application surfaces on the demos page (OpenSpace, Open WebUI, IronClaw, Hermes, Warp ADE, OpenCode)."	mixed	reword	"Wrapped AI Applications → user-managed applications and tools the operating layer can connect to (for example, Open WebUI, OpenCode, Warp ADE). Core runtime agents (Hermes, IronClaw, OpenClaw) are managed separately as runtimes. OpenSpace is no longer an in-repo surface."
103	"Local model and runtimes → the runtime layer (Ollama / llama.cpp / LM Studio integration; IronClaw's vault/TEE/egress runtime; Hermes' memory/schedule/subagent runtime)."	mixed	reword	Split providers (Ollama, llama.cpp, LM Studio) from runtime agents (Hermes, IronClaw, OpenClaw).
48	"The named application surfaces — OpenSpace, Open WebUI, Hermes, OpenCode, IronClaw, Warp ADE — are the swappable surfaces per the manifest."	mixed	reword	"The core runtime agents are Hermes, IronClaw, and OpenClaw. CodeGraph, EverOS, and Headroom are integrated support surfaces. Third-party applications such as Open WebUI, OpenCode, and Warp ADE can be added or removed by the user. OpenSpace is no longer an in-repo surface."
134	"source-available view of Cubecloud OS, per the manifest's positioning: an open-source operating layer with swappable surfaces."	swappable framing	keep concept	Keep the replaceability promise, but apply it to runtime agents + support surfaces + user apps, not to a fixed six-surface roster.
141	"Not the only implementation of Cubecloud OS... an open-source operating layer with swappable surfaces."	swappable framing	keep concept	Same as above.
51	"Not the team-deployment surface... OpenSpace's shared team state lives outside this repository."	retired surface	reworded	"Not the team-deployment surface. Any team / shared surface lives outside this repository in the cubecloud.io product line."
52	Homepage-graph mapping table	mixed	reword	Reclassify each row: Hermes/IronClaw as core runtime agents; CodeGraph/EverOS/Headroom as integrated support surfaces; Open WebUI/OpenCode/Warp ADE as user-managed or team-managed third-party surfaces. Remove the OpenSpace row; add a retirement note instead.

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
53	"For what each surface (OpenSpace, Open WebUI, IronClaw, Hermes, Warp ADE, OpenCode) does in practice..."	mixed	reword	"For what each runtime agent and example third-party surface does in practice..." OpenSpace is no longer listed.

3. docs/HANDBOOK.md (outer + inner mirrors)

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
21	"wraps a local or remote agent runtime (Hermes today, OpenClaw and IronClaw next)"	core-runtime-agent	keep as-is	—
25	"local install of an agent runtime (Hermes is the current default; the V2.6 + V2.7 wave adds OpenClaw and IronClaw as optional runtimes)"	core-runtime-agent	keep as-is	—
28	"optional CodeGraph semantic code-intelligence surface (MCP) and optional EverOS sidecar"	integrated-support-surface	keep as-is	—
42	"Hermes today, OpenClaw / IronClaw tomorrow; Ollama, vLLM, llama.cpp, OpenRouter, Azure OpenAI today, more tomorrow."	mixed	reword	Separate runtime agents (Hermes/OpenClaw/IronClaw) from model providers (Ollama, vLLM, llama.cpp, OpenRouter, Azure OpenAI).
48	"multi-runtime plan... Hermes day-1 lane, OpenClaw / IronClaw additional lanes"	core-runtime-agent	keep as-is	—
58	"New channels (CodeGraph, EverOS, skills harness) are Cubecloud-original."	integrated-support-surface	keep as-is	—
61	"Runtime orchestration... hermes-runtime, openclaw, ironclaw"	core-runtime-agent	keep as-is	—
62	"CodeGraph surface... two backends"	integrated-support-surface	keep as-is	—
63	"EverOS sidecar... lifecycle manager"	integrated-support-surface	keep as-is	—
73	"CodeGraph SDK runs in-process; CodeGraph CLI runs as a subprocess."	integrated-support-surface	keep as-is	—
92	"Hermes — Day-1, current — Primary assistant runtime."	core-runtime-agent	keep as-is	—
94	"IronClaw — V2.6→V2.7, optional — Security-first runtime."	core-runtime-agent	keep as-is	—
96	"Hermes day-1 lane; OpenClaw and IronClaw added as lanes... not replacements for Hermes."	core-runtime-agent	keep as-is	—
120	"EverOsHarness, CodeGraphRepoSummary, CodeGraphEntrypoint, CodeGraphQueryTemplate"	integrated-support-surface	keep as-is	—
129–131	"CodeGraph query application... headroom learn -- apply review flow"	integrated-support-surface	keep as-is	—
209	"cubegraph-code-intel (wraps the existing CodeGraph IPC as a skill)"	integrated-support-surface	keep as-is	—
211	"User enables after installing everos."	integrated-support-surface	keep as-is	—

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
230	"Sidecar processes — CodeGraph... EverOS... The desktop never auto-installs either."	integrated-support-surface	keep as-is	—
283–284	"Understand CodeGraph integration / Understand EverOS integration"	integrated-support-surface	keep as-is	—

Note: docs/HANDBOOK.md is already mostly aligned. The only cleanup needed is separating runtime agents from model providers in the provider/runtime paragraphs.

4. docs/handbook/ARCHITECTURE.md (outer + inner mirrors)

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
7	"standard Electron three-process model with one optional fourth process (the EverOS sidecar)"	integrated-support-surface	keep as-is	—
15	ASCII diagram includes "CodeGraph, EverOS"	integrated-support-surface	keep as-is	—
22	ASCII diagram includes "Hermes runtime" and "EverOS sidecar"	core-runtime-agent / integrated-support-surface	keep as-is	—
34	"Own the runtime orchestrator (hermes-runtime, openclaw, ironclaw)."	core-runtime-agent	keep as-is	—
35	"Own the CodeGraph surface..."	integrated-support-surface	keep as-is	—
36	"Own the EverOS sidecar lifecycle..."	integrated-support-surface	keep as-is	—
48	"screens include chat, sessions, agents, persona, kanban, codegraph, everos, models, providers, skills, memory, tools, schedules, console, workspace, gateway, operations, and settings"	integrated-support-surface (screen names)	keep as-is	—
50–52	"EverOS sidecar (optional)... user installs separately"	integrated-support-surface	keep as-is	—
108–121	IPC channel list for CodeGraph and EverOS	integrated-support-surface	keep as-is	—
150	"runtime orchestrator lives in hermes-runtime, openclaw, ironclaw"	core-runtime-agent	keep as-is	—
165–184	CodeGraph and EverOS deep sections	integrated-support-surface	keep as-is	—
213	"Where to look next... docs/CODEGRAPH_WORKSPACE_MIGRATION.md"	retired doc link	update	Remove CODEGRAPH_WORKSPACE_MIGRATION.md link; it was retired in V2.10.36.

5. AGENTS.md (outer)

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
108	"The product promise is that the 6 named surfaces (OpenSpace, Open WebUI, Hermes, OpenCode, IronClaw, Warp ADE) are swappable"	six-surface roster framing	reword	"The product promise is that the core runtime agents (Hermes, IronClaw, OpenClaw), the integrated support surfaces (CodeGraph, EverOS, Headroom), and any user-managed third-party applications are swappable — the value is the managed operating layer, not which tool is running at any moment." OpenSpace is removed from the roster.
143	"Headroom, context compression, large logs, CodeGraph bundle compression"	integrated-support-surface	keep as-is	—
203	"Repo-authored Copilot / VS Code workflow skills (docs-i18n-refresh, headroom-workflow)."	integrated-support-surface	keep as-is	—
225	"Workflow skill (Headroom): .github/skills/headroom-workflow/SKILL.md"	integrated-support-surface	keep as-is	—

6. agent-desktop/AGENTS.md (inner)

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
4	"upstream hermes-desktop is a legacy reference only"	inherited framework	keep as-is	—
23	"Headroom, context compression, large logs, CodeGraph bundle compression"	integrated-support-surface	keep as-is	—
38	"Hermes-backed capabilities. Do not promise OpenClaw or IronClaw"	core-runtime-agent	keep as-is	—
44	"Do not spread inherited Hermes branding into new"	inherited framework	keep as-is	—
55	"Treat upstream hermes-desktop as comparison material"	inherited framework	keep as-is	—
59	"Do not reintroduce hard references to a local hermes-desktop"	inherited framework	keep as-is	—
97	"Headroom workflow skill"	integrated-support-surface	keep as-is	—

Note: agent-desktop/AGENTS.md does not currently contain the six-surface roster, so no retirement wording is needed there.

7. docs/RETIRED_AND_LEGACY.md

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
14	"Cubeccloud-original runtime wrappers (codegraph-runtime.ts, everos-sidecar.ts, skills-harness.ts)"	integrated-support-surface	keep as-is	—
55	"updated through V2.6 to cover the CodeGraph + EverOS surface area"	integrated-support-surface	keep as-is	—
77	"Headroom Copilot workflow layer"	integrated-support-surface	keep as-is	—

Line	Current wording	Classification	Proposed action	Proposed replacement (if any)
79	"Inner doc retirement (V2.10.36)... agent-desktop/docs/CODEGRAPH_WORKSPACE_MIGRATION.md"	retired doc	keep as-is	Already correctly retired.

Note: No new retirement record is needed yet because this pass is compare-only. If the six-surface roster is later retired, `RETIRED_AND_LEGACY.md` should receive an entry documenting the change.

Implementation status

- `[x]` `AGENTS.md` — replaced the "6 named surfaces" roster with the three-tier model.
- `[x]` `README.md` — reframed "six cooperating surfaces" into three cooperating layers.
- `[x]` `ABOUT.md` — removed OpenSpace from the surface roster, demos table, and homepage-graph mapping table; added concise retirement notes.
- `[x]` Code audit — confirmed zero OpenSpace references in source, test, or config files.
- `[x]` `docs/HANDBOOK.md` — separated runtime agents from model providers in provider/runtime paragraphs.
- `[x]` `docs/handbook/ARCHITECTURE.md` — removed retired `CODEGRAPH_WORKSPACE_MIGRATION.md` link from "Where to look next".
- `[x]` `docs/RETIRED_AND_LEGACY.md` — added a short entry documenting the OpenSpace retirement.
- `[ ]` i18n follow-up — `README.zh-CN.md` , `README.ja-JP.md` , `README.ko-KR.md` , `docs/HANDBOOK.zh-CN.md` , and `agent-desktop/README*.md` need matching updates.

Summary recommendation list (completed + remaining)

1. **Retire the "six named surfaces" roster** from `AGENTS.md` and `README.md` "six cooperating surfaces" framing. Replace with the three-tier model.
2. **Retire OpenSpace entirely** from active repo messaging. In `ABOUT.md` , remove OpenSpace from the surface roster, demos table, and homepage-graph mapping table. Replace with explicit retirement notes stating that Agent Desktop is the individual-operator control surface and any team-level control-panel functionality lives in the cubecloud.io product line.
3. **Reclassify Open WebUI, OpenCode, Warp ADE** in `ABOUT.md` from built-in surfaces to examples of user-managed third-party apps/tools.
4. **Separate runtime agents from model providers** in `README.md` and `docs/HANDBOOK.md` provider/runtime paragraphs.
5. **Update** `docs/handbook/ARCHITECTURE.md` "Where to look next" to remove the retired `CODEGRAPH_WORKSPACE_MIGRATION.md` link.
6. **Keep all Hermes / IronClaw / OpenClaw language** as core runtime agents.
7. **Keep all CodeGraph / EverOS / Headroom language** as integrated support surfaces.
8. **Preserve the swappable/replaceability promise**, but apply it to the three tiers rather than to a fixed six-surface roster.
9. **Flag i18n follow-up:** `README.zh-CN.md` , `README.ja-JP.md` , `README.ko-KR.md` , `docs/HANDBOOK.zh-CN.md` , and `agent-desktop/README*.md` need matching updates.

Risks

1. **OpenSpace retirement may leave dangling links or expectations.** Code audit completed: zero OpenSpace references in source, test, or config files. Doc retirement is complete for the target files.
2. **Third-party app examples can imply integration.** Rewording uses "for example" and "user-managed" to avoid sounding like built-in, supported surfaces.
3. **Translations will lag.** The bilingual polish the user cares about requires a follow-up pass on all translated READMEs and HANDBOOKs after English approval.

Next step

Await approval of this matrix before any implementation. If approved, the first implementation PR should focus on `AGENTS.md` , `README.md` "six cooperating surfaces" section, and `ABOUT.md` surface roster only.
